

## GlobalLink™ Autonomy Interwoven TeamSite Adaptor

Autonomy Interwoven TeamSite is an advanced enterprise content management platform that enables users to publish and manage content consistently across websites, portals, and printed material. Autonomy helps companies standardize their communication efforts, increasing the value of their information assets.

Translations.com's GlobalLink Product Suite integrates with TeamSite, providing users with a powerful solution to initiate, automate, control, track, and complete all facets of the translation process. The unique combination of the robust TeamSite functionality and the extended localization workflow capabilities of GlobalLink gives Autonomy customers a comprehensive platform to manage enterprise content for markets around the globe.

### AUTONOMY INTERWOVEN TEAMSITE ADAPTOR AT A GLANCE

#### Seamless Integration

Business users can initiate translation workflows through GlobalLink without having to leave the TeamSite user interface. Content can also be automatically routed for translation based on workflows and/or change detection.

#### Process Flexibility

GlobalLink integrates directly with TeamSite work areas or with custom TeamSite workflows, allowing content to automatically pass from source language development to translation service providers via customizable business rules. For example, automatic change detection rules can be configured to identify, batch, and send new or changed content for translation, simply notifying TeamSite business users and their localization providers via email.

#### Translation Memory Integration

GlobalLink is the only solution that allows TeamSite users to access translation memory (TM) assets directly within the TeamSite environment. Translation memory is a tool that stores previously translated content, allowing clients to re-use content where appropriate. The use of TM accelerates turnaround time, helps to maintain brand consistency in terminology, and significantly reduces costs. TeamSite users can view TM information – including instant statistics on leveraged content – via optional integration with the GlobalLink TM Server module.

#### Content Control

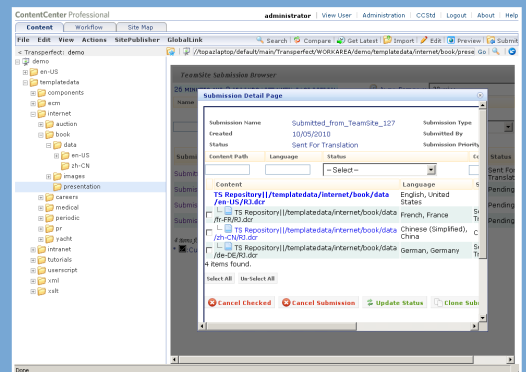

The GlobalLink integration with TeamSite offers users the ability to easily identify and route content for translation while simultaneously enhancing control over source content during the translation process. Business users can elect to either lock or unlock source-language documents for editing during the translation process, ensuring strict synchronization between original and target-language versions.

#### Rapid Return on Investment

GlobalLink provides immediate relief to IT departments and business users who are overburdened by the complex demands of supporting manual initiation and control of multilingual content workflows. The integrated solution also provides better visibility into the localization process for budgetary analysis.

### RAPID DEPLOYMENT

The integration of GlobalLink with TeamSite has a minimal impact on your IT environment and staff. No dedicated hardware or IT personnel are required, and Translations.com will provide world-class technical support and installation services to meet all your global needs.

Key Features	Benefits
Translation workflows initiated through TeamSite user interface or fully automated through business rules	<ul style="list-style-type: none"> <li>▪ Leverage existing TeamSite user knowledge by delivering all new functionality in a familiar environment</li> </ul>
Workflow-based localization process management	<ul style="list-style-type: none"> <li>▪ Provides greater control of authoring process during translation phase</li> <li>▪ Empowers internal content reviewers</li> </ul>
Automated change detection	<ul style="list-style-type: none"> <li>▪ Allows content authors to focus on updates to source-language content</li> </ul>
TM Server integration	<ul style="list-style-type: none"> <li>▪ Access TM assets and statistics within the TeamSite User Interface</li> <li>▪ Share TM information with multiple translation teams (internal or external)</li> <li>▪ Reduce costs, accelerate turnaround times, maintain consistent terminology</li> </ul>

Enterprise-class security	<ul style="list-style-type: none"> <li>▪ Meets strict enterprise network security requirements</li> <li>▪ Replaces traditionally insecure email and ftp transfer of sensitive content</li> </ul>
On-demand analytics	<ul style="list-style-type: none"> <li>▪ Provides metrics to gauge the success of strategic global content initiatives</li> <li>▪ Increases mutual accountability of diverse project teams and business units</li> </ul>

## The GlobalLink Product Suite

### An Enterprise Platform for Managing Multilingual Content

GlobalLink is a modular suite of technology products that provides enterprise-wide solutions for organizations that must communicate globally.

For today's multinational organizations, providing critical business information in-language for various stakeholders is no longer optional; it is a prerequisite for success. Combine this with the fact that businesses are generating more information, resulting in the creation of more content, and it is apparent that the ability to relay information across languages in a cost- and time-efficient manner has evolved into an essential business function.

The GlobalLink Product Suite drastically reduces the time, effort, and money required not only in the translation process itself, but also in each area of workflow surrounding the management of multilingual content. Each product in the suite can function either independently or as part of an integrated system to drive maximum efficiency.

The GlobalLink Product Suite includes:

- GlobalLink Project Director
- GlobalLink TM Server
- GlobalLink Translation & Review Portal
- GlobalLink Content Director
- GlobalLink Term Manager
- GlobalLink TransStudio
- GlobalLink Portal
- GlobalLink OneLink
